

GTUG Tagung am 5. und 6. November 2018 in Darmstadt

- *Thema: Neue Entwicklungen und Erfahrungen*

WORKSHOP

Dienstag, 6. November 2018 – 15:00 bis 17:00

In this two hour Post-GTUG session we provide a practical approach to query tuning using the Merlon SQLXPress Visual Query Tuner. Improving the performance of your SQL queries is often the easiest and safest way to help reduce response time and increase throughput. SQL query tuning is the process of adjusting a SQL query to make it run faster, while returning the same results as before.

During the session you will learn how to:

- Understand the existing execution plan.
- Determine the desired execution plan.
- Change the database or query to get the desired plan.
- Confirm that the new plan improves performance.
