Title

Safeguarding Transactions: AI-Driven Fraud Detection Intelligence with Striim and HPE

Abstract

The surge of online, open banking, and mobile payments, alongside the rise of AI-driven security threats, underscores the need for heightened vigilance in fraud detection. HPE and Striim unite to confront challenges with AI-powered solutions, leveraging advanced machine learning and real-time analytics to strengthen the security of organization's and their data. Striim's ML-driven analytics platform continuously monitors and analyzes vast amounts of data from various sources to detect anomalies promptly, while integrating with HPE NonStop's fault-tolerant systems, ensuring 24x7 availability and unmatched data integrity. Discover how this collaboration empowers businesses to detect anomalies and potential fraud in real-time, mitigating risks and safeguarding their reputation.
